

Metal Injection Molding (MIM)

MIM Application

- Computer and computer accessory
- Digital camera, Handheld Digital Video Camera and Mobile Devices.
- Medical & Dental parts
- Micro device components.
- Automotive components
- Tools Parts
- Chemical device parts
- Sports devices parts
- Home application components
- Jewelry
- Navigation device components

hinge Parts

3C Parts

Cell Phone Stand

MIM Samples

MIM Samples

Example - MIM Part for DV Hinges

Functions:

- Two rotary directions with position setting.
- Provide the force to position and ramp up.
- Provide the circuit hole for electric wire to go through.

Characteristics by using MIM:

- Combine 5 components into a single part
- Higher strength of parts
- Greater design-flexibility
- Better stability after assembly
- Smaller tolerance after assembly
- Lower management cost of components

Digital video hinges using MIM technology: (a) assembled hinge, (b) Metal injection molded U-shaped bracket

MIM Bearing

Monitor could be rotated

Components are reduced from 27 to 13

Competitive Advantages

- **Professional MIM Team**
 - Provide customers with a total solution from design, tooling to mass production
- **Flexible Material Choices**
- **Vertically Integrated Production Capability**
- **Abundant Manufacturing Experience**
 - Offer the most appropriate method of production
- **Advanced Equipment & Sufficient Capacity**
 - Vacuum furnace x 12, Injection molding machine x 52
- **Strict Quality Control (ISO 9001 : 2000 & ISO 14001 Approval)**
 - Deliver reliable quality
